## *Nexus / Mi Protocol Mutual Confidentiality and Early Product Access Agreement*

This Agreement is entered into by and between **Richard B. Jamison**, individually and doing business as **Resonant Web Design** ("Richard"), and **Bill Faber**, individually and on behalf of **Faber Capital Resources** ("Bill" or "FCR"). It is intended to record the parties' present understanding in plain, good-faith terms while Richard prepares the first live commercial release of the **Nexus / Mi Protocol** product inside Faber Capital Resources.

### 1. Spirit and Intent

Richard and Bill are entering this Agreement as serious business operators who believe there may be a much larger opportunity in front of them. Richard has spent approximately nine months developing Nexus, its connected operating structure, automation logic, communications framework, management views, software architecture, and the Mi Protocol that supports the larger product.

What began as a private internal command center gradually became a repeatable product. The FCR Nexus is intended to be the first live commercial release of that product inside an operating financial business. Bill will have an unusual early view of the system, its methods, its history, and its future direction. Richard will also receive access to private FCR business information that must be protected with equal care.

The purpose of this Agreement is to create a **safe, open working environment**. It is not intended to prevent honest criticism, practical discussion, mentorship, or the exchange of ideas. It is meant to let both parties speak and work freely while protecting the private product, private company information, and trust being placed in one another.

### 2. The First FCR Release

The parties understand that the FCR implementation is more than a standard CRM setup. It is the first operating release of Nexus / Mi Protocol in a real company environment. The work may include GoHighLevel agency architecture, connected websites and admin panels, lead and transaction pipelines, communications, document controls, automations, dashboards, AI-assisted tools, reporting, security boundaries, product logic, and other connected business systems.

Richard has been preserving development history, code records, repositories, design decisions, authorship information, cryptographic records, blockchain-based records, and other evidence of the product's evolution. These records and the product they document remain protected even when portions of the system are configured for FCR.

### 3. Mutual Confidentiality

Each party agrees to protect the other party's confidential information and to use it only for the FCR project, the evaluation and improvement of the FCR Nexus release, and the parties' related business discussions.

---

Neither party will use the other party's confidential information to compete unfairly, bypass the other party in a relationship, reproduce the other party's private product or internal process, or claim the other party's work as its own.

#### **4. Information Protected by This Agreement**

Confidential information means nonpublic information that a reasonable person would understand should be kept private, whether it is spoken, written, demonstrated, texted, emailed, stored in software, placed in an admin panel, or shared through a private link.

**Product information.** Nexus, the Mi Protocol, source code, reusable code, prompts, automations, workflows, business logic, system architecture, interfaces, databases, templates, dashboards, designs, documentation, security methods, credentials, private links, product plans, pricing, and unreleased features.

**Development records.** Code repositories, commits, build logs, design decisions, authorship records, cryptographic or blockchain-based records, and other records used to document the product and its evolution.

**FCR information.** Borrower, lender, broker, agent, referral, transaction, underwriting, financial, operational, employee, vendor, marketing, and strategic information.

**Private working material.** Conversations, notes, drawings, demonstrations, prototypes, reports, credentials, files, plans, and decisions exchanged during the relationship, together with any information identified as confidential or explained as private when it is shared.

#### **5. Permitted Use and Limited Access**

Bill and authorized FCR users may use the Nexus / Mi Protocol environment only for approved FCR business and for evaluating, testing, correcting, and improving the FCR release. Richard may use FCR information only to design, build, operate, support, analyze, and improve the agreed FCR systems and services.

Confidential information may be shared only with employees, contractors, attorneys, accountants, security professionals, or advisors who genuinely need it for the project and who are expected to protect it. Neither party is required to disclose information it does not wish to share.

#### **6. Practical Protection of the Product and the Business**

The parties agree to act carefully with credentials, private links, source material, business records, and early product access. Without written permission, neither party may publish, distribute, sell, license, forward, demonstrate publicly, copy for another company, reverse engineer, decompile, rebuild, clone, or give away the other party's confidential material.

Neither party will upload protected product information, borrower information, private financial records, credentials, or company data into public artificial-intelligence tools, public repositories, unapproved file-sharing services, or other systems that have not been approved for the project.

---

If either party believes information, passwords, files, or private links may have been lost, exposed, sent to the wrong person, or accessed without permission, that party will notify the other promptly so the parties can respond together.

## **7. Ownership of Nexus and the Mi Protocol**

Richard and Resonant Web Design retain ownership of Nexus, the Mi Protocol, the core product framework, reusable code, pre-existing code, development history, internal tools, product architecture, templates, methods, workflows, prompts, designs, and other intellectual property brought into or developed as part of the larger product.

FCR receives the access and project-specific use rights described in the parties' invoice, services agreement, and implementation documents. This confidentiality Agreement does not sell, assign, or transfer ownership of the Nexus / Mi Protocol product, and it does not authorize resale, sublicensing, cloning, or use for another company.

## **8. Ownership and Protection of FCR Information**

FCR retains ownership of its borrower and transaction records, lender and broker information, company content, internal procedures, agent and referral information, financial records, credentials, and other FCR business data. Richard does not obtain ownership of FCR's private business information by building or operating the system.

Highly sensitive information, including Social Security numbers, complete bank statements, identification documents, protected financial records, and regulated borrower information, will be stored and handled only through systems and procedures approved for that purpose. The parties will define practical security boundaries as the FCR system is built.

## **9. Information That Is Not Confidential**

Information is not confidential when the receiving party can reasonably show that it was already public without a breach of this Agreement, was lawfully known before disclosure, was lawfully received from someone authorized to share it, or was independently developed without using the other party's confidential information.

## **10. Required Legal Disclosure**

If either party is legally required to disclose confidential information, that party will give the other reasonable notice when legally permitted and will disclose only the information that is actually required.

## **11. Future Opportunity and No Partnership Today**

Richard and Bill may openly discuss a future advisory role, mentorship relationship, investment, product participation, revenue arrangement, equity interest, strategic relationship, or partnership. Richard believes Bill's experience and the development of the FCR agency could eventually make Bill an important participant in the larger Nexus company and product.

This Agreement does not create that future relationship today. It does not create a partnership, joint venture, employment relationship, fiduciary duty, ownership interest, voting right, or authority for either

---

party to act for the other. Any future partnership, ownership, investment, advisory role, compensation arrangement, or product participation must be stated in a separate written agreement signed by both parties.

## **12. Return, Removal, and Continuing Protection**

When reasonably requested, each party will return or remove the other party's confidential information that is no longer needed for the project. Executed contracts, system logs, routine backups, legal records, and records required to document the work may be retained, but they remain protected by this Agreement.

## **13. Length of the Confidentiality Promise**

The confidentiality duties in this Agreement continue for five years after the last confidential disclosure. Information that qualifies as a trade secret remains protected for as long as it continues to qualify as a trade secret under applicable law.

## **14. Good Faith and Problems**

This Agreement is meant to protect the relationship, the FCR business, the Nexus product, the Mi Protocol, the private information, and the opportunity ahead. The parties agree to communicate directly, act honestly, correct misunderstandings quickly, and attempt to resolve concerns in good faith.

The parties understand that unauthorized disclosure of source material, early product information, private credentials, protected borrower information, or company data could cause harm that may not be fully repaired by money alone. Either party may seek appropriate legal relief when necessary.

## **15. Ohio Law and Electronic Signatures**

Ohio law governs this Agreement. Electronic signatures, SignNow signatures, electronically signed copies, and separate signature pages may be treated as originals. The effective date is the date Bill signs electronically, unless the parties agree to another date in writing.

## **16. Relationship to the Existing Services Agreement**

This Agreement works alongside the parties' existing invoice, connected-build agreement, project scope, and later implementation documents. If the documents address different subjects, all of them apply. If there is a direct conflict concerning ownership or delivery of paid project work, the existing services agreement controls that issue.

## **17. Complete Understanding**

This document records the parties' complete confidentiality understanding concerning the FCR Nexus / Mi Protocol early release and related discussions. Any change to this Agreement should be made in writing and accepted by both parties.

Accepted and agreed:

**By: /s/ Richard B. Jamison**

Date: July 19, 2026

Individually and for Resonant Web Design

---

By: \_\_\_\_\_ Date: \_\_\_\_\_

Bill Faber, individually and for Faber Capital Resources

**Electronic signing instructions:** A document-specific SignNow link will be placed in the FCR Important Documents / Contracts area and communications panel. After signing, the completed agreement will be returned to Richard and stored in the FCR admin panel signed-contract repository.
