

FABER CAPITAL RESOURCES

Preliminary Website Build, Market Analysis & Ownership Handoff

What was changed, why it was changed, what the market requires, and how Bill retains control of the work.

Executive conclusion

The mockup is not a visual redesign for its own sake. It is a controlled conversion and positioning rebuild inside the current FCR layout. The project preserves the recognizable website while correcting the language, qualification, trust, search structure, and next-action path that should have been present when the site was first launched.

Prepared for	William M. Faber Faber Capital Resources
Prepared by	Richard B. Jamison Resonant Web Design
Working site	https://richardbjamison.github.io/faber-capital-resources/
Build type	Fixed-layout conversion copy, market positioning, SEO-ready structure, and code handoff
Build time	Approximately four focused production hours
Standalone value	Approximately \$600 as a preliminary website conversion build

Important scope note: The \$600 value describes this completed preliminary mockup phase - analysis, fixed-layout conversion copy, metadata, and implementation-ready code direction. It is not the full production website rebuild, deployment, technical migration, analytics setup, or ongoing SEO program contained in the larger FCR package.

1 | Purpose of This Document

A completed working asset - not another proposal

This report records the work completed on the Faber Capital Resources mockup and explains the reasoning behind it. It is intended to let Bill evaluate the wording and structure as an analytical business owner, not simply react to a new design.

The working site keeps the current FCR visual framework, images, page order, and familiar four-card homepage structure. The changes are concentrated in the parts that determine whether a visitor understands the company, trusts the offer, enters the correct path, and can be measured as a real opportunity.

Ownership principle

Regardless of whether Bill continues with Resonant Web Design, the completed mockup concept and the replacement code prepared for this phase are being made available for FCR's use. The implementation instructions will be stored in organized Markdown files in the repository and may be sent to FCR's current website company.

What this phase includes

- Review of the existing FCR website, its public copy, page structure, technical signals, and conversion path.
- Review of the previous FCR website-conversion and SEO-market reports.
- Fresh review of Cogo Capital's public broker and product position.
- Fresh review of direct-lender and regional competitors, including Tidal Loans, Dominion Financial, Ridge Street Capital, and Easy Street Capital.
- Replacement homepage positioning, form language, four-card messages, site description, titles, and meta description.
- Reconstruction of About, Services, Funding Solutions, Referral, Contact, and FAQ wording within the existing page framework.
- Qualification language designed to reduce unsupported universal promises and preserve final underwriting boundaries.
- A working mockup Bill can approve, revise, reject, or transfer to another web provider.

What this phase does not claim

- It does not confirm licensing, carrier co-branding rules, underwriting guidelines, product availability, or legal disclosures.
- It does not guarantee rankings, lead volume, funded transactions, or a conversion-rate increase.
- It does not replace the need for Bill and Cogo to confirm the final intake, lead-tracking, product, and approval language.
- It is not the final deployment, hosting migration, security hardening, analytics connection, CRM integration, or full SEO campaign.

2 | The Original Problem

The site contained the company, but did not explain the company

The original homepage began with “Leading The Way In The Real Estate Market.” That phrase could describe a brokerage, development company, wholesaler, property manager, investor, or lender. A visitor reaching a financial-services website should not need to infer what the company does.

Visitor question	Original answer	Commercial risk	Mockup answer
What is FCR?	Broad real-estate/private-money language	The visitor may leave without identifying the service	A capital resource for non-owner-occupied investor transactions
Who is it for?	Multiple audiences are mixed together	No dominant customer journey	Real-estate investors first; partners and resources routed separately
What is different?	No-credit, flexibility, speed, and 100% claims	Strong claims without a clear qualification framework	Deal-first review, available structures, human guidance, and conditional project funding
What should I do?	Generic contact form	Contact is not connected to a commercial intent	Start a Deal Review and provide useful property/transaction facts
Why trust it?	General superlatives	Trust depends on inference	Bill-led agency position, defined process, accurate limitations, proof to be added

The highest-value corrections

- The hero now identifies a capital function immediately: “Bring Us the Deal. Let's Find the Right Capital Path.”
- The form now asks for the property and transaction, rather than behaving like a generic contact box.
- The four existing homepage cards are preserved but converted into an investor decision sequence.
- The absolute “no credit, no problem” message is replaced with a property-first explanation that still acknowledges the effect of credit, background, leverage, pricing, and reserves.
- Closing language is changed from a confusing mixture of 14 days, three to four weeks, and 30 days into a clear statement that timing depends on a complete file and final process.
- The 100% message remains commercially visible, but it is tied to qualifying joint-venture transactions, total project economics, ARV limits, documentation, and final approval.

3 | Bill's Position in the Market

FCR should present as the agency - not disappear behind the carrier

The public information reviewed indicates that Cogo Capital supports a broker model, provides a personalized broker dashboard, and offers investor-focused funding programs and processing infrastructure. That makes Cogo potentially central to the operating process, but it does not require FCR to make Cogo its public identity.

The recommended public structure is similar to an independent agency model: Bill owns the relationship, presentation, intake experience, communication standard, and future agent organization. The carrier or lender provides authorized products, underwriting, processing, funding, and required disclosures according to the actual agreement.

Strategic boundary

FCR should communicate confidently as the agency while never implying that it independently controls underwriting, final approval, lender terms, or funding decisions that belong to Cogo or another capital source.

Why this position matters

- Bill can build an agency capable of supporting multiple agents under one standard.
- The public brand can survive the addition of new products or capital sources.
- The website can generate owned opportunities rather than existing only as a validation page for assigned leads.
- The company can become known for judgment, preparation, communication, and accountability - advantages that are difficult for a generic application portal to reproduce.
- The site can support a later transition to Real Estate Capital Resources if Bill approves the business name, domain, trademark, and market structure.

Recommended present position

Capital resources for real-estate investors - not another one-size-fits-all application.

Commercial promise: Bring us the deal. We'll help you find the capital path.

4 | Competitive Market Analysis

What the strongest competitors are doing correctly

The competitor lesson is consistent: financial visitors respond to specificity. The strongest sites do not rely on broad claims. They publish program details, examples, process steps, local pages, calculators, recent transactions, proof, and a direct next action.

Competitor	What wins attention	What FCR should learn	Where FCR can differentiate
Tidal Loans	Detailed 100% purchase-and-rehab explanation, ARV math, worked example, FAQs, calculators, state pages	Explain the transaction with equal precision	Human review, JV education, agency judgment, and personal accountability
Dominion Financial	100% LTC headline, no-appraisal positioning, 48-hour	Lead with one clear commercial proposition and visible proof	Avoid unsupported speed competition; win on structure

Competitor	What wins attention	What FCR should learn	Where FCR can differentiate
	message, strong proof metrics, direct approval path		and guidance
Ridge Street Capital	Local Florida pages, borrower tiers, rates, LTC, loan sizes, process steps, calculators, funded examples	Use verified numbers, markets, and borrower categories where authorized	More flexible agency story and a broader capital-path conversation
Easy Street Capital	Product pages, recent funding library, state pages, guides, reviews, and repeat education assets	Build proof and useful resources, not just marketing claims	Bill-led relationship, deal preparation, and partner network
Cogo Capital	Broker program, portal, lender products, defined loan process, training, and processing infrastructure	Align the FCR operating system with the real carrier process	FCR owns the client experience and agency brand while honoring carrier boundaries

Qualitative benchmark scorecard

Scale: 1 = weak/limited, 5 = strong. This is a public-site benchmark, not traffic, revenue, or conversion data.

Site	Offer clarity	Content depth	Local/search structure	Proof	Next action	Human/agency story
Original FCR	2	2	1	1	2	3
FCR Phase-1 mockup	4	3	2	2	4	5
Tidal	5	5	5	4	5	3
Dominion	5	4	3	5	5	2
Ridge Street	5	4	5	5	5	3
Easy Street	4	5	5	5	4	3
Cogo	4	4	3	4	4	4

5 | What Was Built in the Mockup

A fixed-layout conversion rebuild

The mockup deliberately avoids shocking Bill with an unnecessary visual replacement. It proves the strategy by using the same recognizable site and changing the meaning inside it.

Area	Completed change	Reason
Site descriptor	Real estate capital for investors and their next opportunity	Identifies audience and category without overcommitting
Homepage title/description	Real Estate Funding for Investors; product-led meta description	Replaces generic Home metadata with search intent
Hero	Bring Us the Deal. Let's Find the Right Capital Path.	Explains the agency role in one sentence
Primary CTA	Start a Deal Review	Turns vague contact into a defined commercial action
Hero form	Property address and deal information added; approval disclaimer	Collects information that can become an actionable opportunity
Homepage body	Real Estate Decisions Start With the Deal	Frames the process around underwriting reality
Four cards	Deal-First Review; Clear Path to Closing; Structures Built for Investors; Up to 100% Project Funding	Preserves the design while creating a qualification story
About page	Bill-led investor capital agency explanation, product list, process, team standards	Establishes leadership and agency identity
Services page	Property reports, debt information, proof of funds, and lead data rewritten with limits and due-diligence boundaries	Turns miscellaneous products into organized investor resources
Funding pages	Program language organized by investor need and qualified availability	Allows future product pages and SEO clusters
Referral/partner path	Relationship and submission pathway separated from borrower intake	Supports regional partner acquisition and attribution
Nexus/offer access	Private working links retained as project controls	Creates an operating and communication layer without changing the public brand

The homepage four-card logic

1	Deal-First Review	Begin with property, costs, ARV, experience, credit profile, and exit strategy.
2	A Clear Path to Closing	Explain that speed begins with a complete file, responsible communication, and final process.

3	Structures Built for Investors	Show the product family without claiming that every product fits every borrower.
4	Up to 100% Project Funding	Keep the differentiator visible while qualifying the JV, ARV, documentation, and approval requirements.

6 | Why It Should Have Been Built This Way From Day One

Financial websites sell certainty before they sell money

1. Category clarity

A visitor should know within seconds whether the company is a lender, broker, capital agency, investor resource, or real-estate operator. Ambiguity reduces trust and wastes paid or referred traffic.

2. Commercial intent

A lead with a property is more valuable than a visitor who merely sends a general message. The form and call to action should collect the minimum facts required to identify the transaction.

3. Truthful qualification

Strong funding claims attract attention, but unqualified absolutes create distrust, compliance risk, and poor-fit inquiries. The proper message explains the maximum opportunity and the conditions that control it.

4. Agency ownership

Bill should own a public platform capable of representing approved products, training agents, generating direct leads, and surviving changes in carriers or product sources.

5. Search architecture

Search engines rank specific pages that answer specific questions. A general homepage cannot carry fix-and-flip, 100% funding, DSCR, construction, JV, regional, referral, and proof-of-funds intent by itself.

6. Measurement

Every form, call, referral, and campaign should be connected to an outcome. Without attribution, the company cannot know which website work, agent, region, product, or lead source creates funded revenue.

7. Proof

Financial visitors look for named leadership, experience, transactions, reviews, process, credentials, disclosures, and recent activity. Generic superlatives are weaker than verifiable facts.

The design decision

The correct first move was not to replace Bill's art or visual preferences. It was to correct the sales architecture inside the site he already recognizes, then allow him to approve the wording before deeper redesign, migration, SEO expansion, or automation.

7 | SEO and Owned-Lead Strategy

The mockup creates the foundation; authority requires a system

FCR was previously discoverable primarily by name but had little visible depth for non-brand investor searches. The opportunity is not a single ranking adjustment. It is the construction of a coherent search presence around products, markets, questions, proof, and useful transaction tools.

Phase	Primary job	Examples	Measurement
Foundation	One canonical company and technically clean site	Titles, descriptions, one services URL, redirects, sitemap, schema, domain email, analytics	Indexation, branded visibility, crawl health
Product intent	Answer high-intent financing needs	Fix & flip, purchase + rehab, bridge, DSCR, construction, commercial, JV, proof of funds	Qualified visits, deal-review starts, product fit
Regional authority	Earn visibility where FCR can substantiate service	Ohio/Cleveland, South Florida or other confirmed markets; no cloned city pages	Local impressions, calls, forms, partner leads
Proof and education	Reduce uncertainty and create repeat visits	Funded examples, process, checklists, ARV/JV explanations, borrower stories, calculators	Engagement, return visits, assisted conversions
Partner acquisition	Build owned regional distribution	Agents, wholesalers, contractors, property managers, title/attorney, investor groups	Partner source-to-funded attribution
Optimization	Invest where results are real	Search Console, calls, forms, CRM source, lost reasons, funded outcomes	Cost and revenue per funded opportunity

Search priorities

- Begin with the actual product and geographic combinations Bill and Cogo confirm.
- Use the differentiator - deal-first, property-first, qualifying project funding, and human review - rather than fighting national lenders on the broadest generic terms.
- Build strong pages with real information, not dozens of cloned city pages.
- Publish transaction tools and resources that investors return to: deal intake, ARV or project worksheet, rehab budget, required-document checklist, proof-of-funds pathway, and referral resources.
- Connect every website inquiry to source, agent, product, stage, and funded/lost outcome before increasing media spend.

8 | Analytics and Acceptance Criteria

How Bill should evaluate the mockup

The immediate decision is not whether every word is final. The decision is whether the site now expresses the correct business architecture. Bill should review the mockup as the designer of the company and mark where the product, process, terminology, or emphasis is wrong.

Question for Bill	Why it matters	What changes after the answer
Which Cogo products may FCR currently represent?	Controls public product language	Final program pages and site menu
What other capital sources or products are active today?	Determines whether multiple-path language is current or future	Product matrix and agency positioning
Which markets are genuinely served?	Prevents false local pages and mixed geography	Regional SEO structure
What does qualifying 100% funding actually require?	This is the strongest claim and largest trust risk	Dedicated 100%/JV explanation and calculator
What should Cogo receive from each lead?	Defines the intake data and tracking relationship	Form, Plaud/AI intake, spreadsheet, GHL fields
What proof may be published?	Competitors win with transactions, reviews, scale, and process	Case studies, funded deals, leadership and trust layer
What role will future agents have?	The website must support the agency being built	Agent pages, resources, permissions, onboarding and partner paths
Does FCR remain the permanent name?	Affects entity, domain, design, trademark, and long-term SEO	FCR continuation or Real Estate Capital Resources transition

Measurement stack for the production site

- Google Search Console and analytics connected to the canonical domain.
- Call tracking and form tracking with source preserved.
- GHL record creation or approved handoff after Bill and Cogo define the intake.
- Response time, contact attempts, qualified-deal rate, application rate, submission rate, term-sheet rate, acceptance rate, and funded outcome.
- Lost reasons: product fit, property, leverage, credit, incomplete file, timing, price, competitor, no response, or underwriting.
- Partner/agent attribution and repeat-borrower tracking.

9 | Ownership, Repository and Website-Company Handoff

Transparent delivery is part of the product

The mockup is designed so that Bill can approve the concept without becoming dependent on one provider. The replacement wording, implementation notes, and program logic will be saved as organized Markdown files in the FCR repository.

Recommended repository package

File	Purpose	Who can use it
FCR-WEBSITE-COPY-MAP.md	Page-by-page approved wording and original-to-replacement map	Bill, Resonant, current website company
FCR-IMPLEMENTATION-INSTRUCTIONS.md	Exact page paths, headings, buttons, metadata, forms, redirects, and validation checklist	Web developer
FCR-PRODUCT-CLAIMS-TO-CONFIRM.md	Terms and statements requiring Bill/Cogo approval	Bill, Cogo, counsel/compliance
FCR-SEO-ARCHITECTURE.md	Product, regional, referral, proof, and resource page structure	SEO/web team
FCR-CHANGELOG.md	What changed, when, why, and approval status	All project participants
FCR-RECOVERY-AND-ROLLBACK.md	How to restore the prior copy or reapply the approved version	Owner and technical team

Handoff commitment

If Bill chooses not to continue with Resonant Web Design, the mockup and documented code direction may still be delivered to his current website company for implementation. If Bill continues, this phase becomes the approved messaging foundation for the larger website, GHL, Nexus, and SEO build.

10 | Work Performed and Standalone Value

A four-hour preliminary conversion build

If this work had been ordered as the first assignment on an existing website, it would be treated as a focused preliminary website conversion build: approximately four hours of analysis, market review, page reconstruction, copy production, mockup implementation direction, and ownership handoff.

Work block	Included work	Approx. time
Site and prior-report review	Original website, technical findings, conversion audit, SEO report, and current mockup structure	0.75 hr
Market and carrier review	Cogo position, competitive pages, offer patterns, local/product search structure	0.75 hr
Conversion architecture	Primary audience, promise, CTA, form, four-card sequence, trust and qualification	0.75 hr

Work block	Included work	Approx. time
	boundaries	
Site-wide copy reconstruction	Homepage, About, Services, Funding Solutions, Referrals, Contact, FAQ, metadata	1.25 hr
Implementation and handoff preparation	Code direction, review environment, ownership notes, developer-ready structure	0.50 hr

Standalone preliminary-build value: approximately \$600.

This value is separate from a complete production rebuild, deployment, platform migration, security review, analytics implementation, CRM/GHL integration, long-term content system, or ongoing SEO work. If the full connected package proceeds, the mockup becomes part of that larger scope rather than an isolated deliverable.

11 | Recommended Next Decision

Bill approves the business logic before anyone perfects the website

1. Bill reviews the working site and marks what is accurate, inaccurate, incomplete, or written in the wrong language.
2. Bill confirms the actual Cogo relationship, products, lead-tracking requirements, disclosures, and intake fields.
3. The approved wording is frozen in the repository as Version 1.
4. Bill chooses whether the current website company implements the code or Resonant continues into the full production build.
5. The final website is connected to the approved GHL/Nexus intake and analytics environment only after the business workflow is confirmed.
6. SEO expansion begins with verified products, markets, proof, and measurement - not generic mass content.

Final working conclusion

The mockup demonstrates that FCR does not need to abandon its identity to become more credible. The site needs a disciplined explanation of the agency, a deal-first intake path, qualified product language, visible ownership, measurable follow-up, and a search structure built around what Bill can genuinely deliver.

Source Notes and Review Limitations

This report combines Bill's business description, the completed FCR mockup, previous FCR conversion and SEO reports, the public FCR website, repository review, and current public competitor pages. It is a marketing, conversion, and website-positioning analysis. It is not a legal, licensing, underwriting, accounting, cybersecurity, trademark, or regulatory opinion.

Product terms, service areas, lender relationships, referral compensation, carrier references, required disclosures, rates, leverage, credit requirements, closing times, and approval language must be confirmed by Bill, Cogo, applicable agreements, and qualified professionals before publication.
